NOTES

INTRODUCTION

Parts Ordering Instructions

1. Order parts from your local M-C Dealer or distributor.
2. Always furnish the Grain Dryer model and serial number. This information is stamped on the serial number plate.
3. When ordering parts be sure to furnish the part number, description and quantity required.

NOTE: Attaching hardware is listed (but not included) with the main part. It must be ordered separately.

4. Inspect all shipments upon receipt. If any packages and/or boxes are missing, or parts are damaged, file a claim with the carrier immediately. Failure to do so may void a claim. Check the shipment against the packing list carefully. Report any shortages to the shipper immediately.
5. Do not return any parts to the Mathews Company without a "Return Goods Authorization" from the factory. All return parts shipments must be shipped prepaid (COD shipments will not be accepted). Shipments must also include the following:
 - A letter of explanation including the "Return Goods Authorization Number," your name and address.
 - A list of all parts being returned. List must include part numbers, description, quantity, and original invoice number.

Model and Serial Number Location

The model and serial number of your Grain Dryer are stamped on a plate located on the left front end

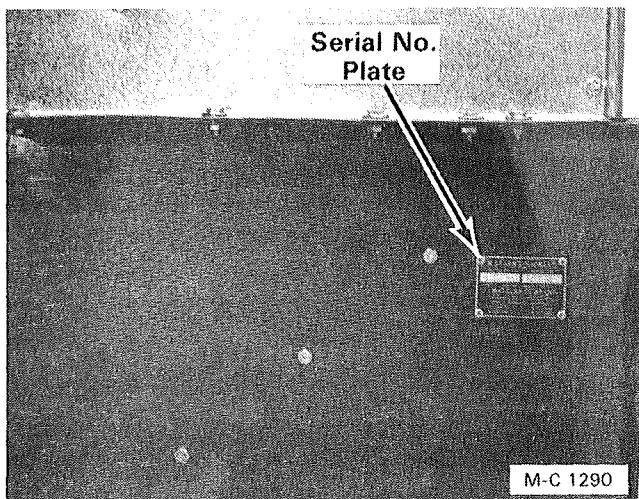

Figure 1

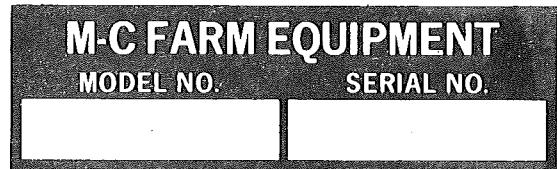

Figure 2

panel, see Figure 1. On late production dryers, the plate is on the dryer front base panel just below the location shown in Figure 1. Record the model and serial number in the blank spaces in Figure 2.

Capscrew Grade Identification

There are four grades of hex-head capscrews. Grade 1 and 2 are common capscrews, grade 5 and 8 are used when greater strength is required. Each grade can be identified by the marking on the head of the capscrew, see chart below.

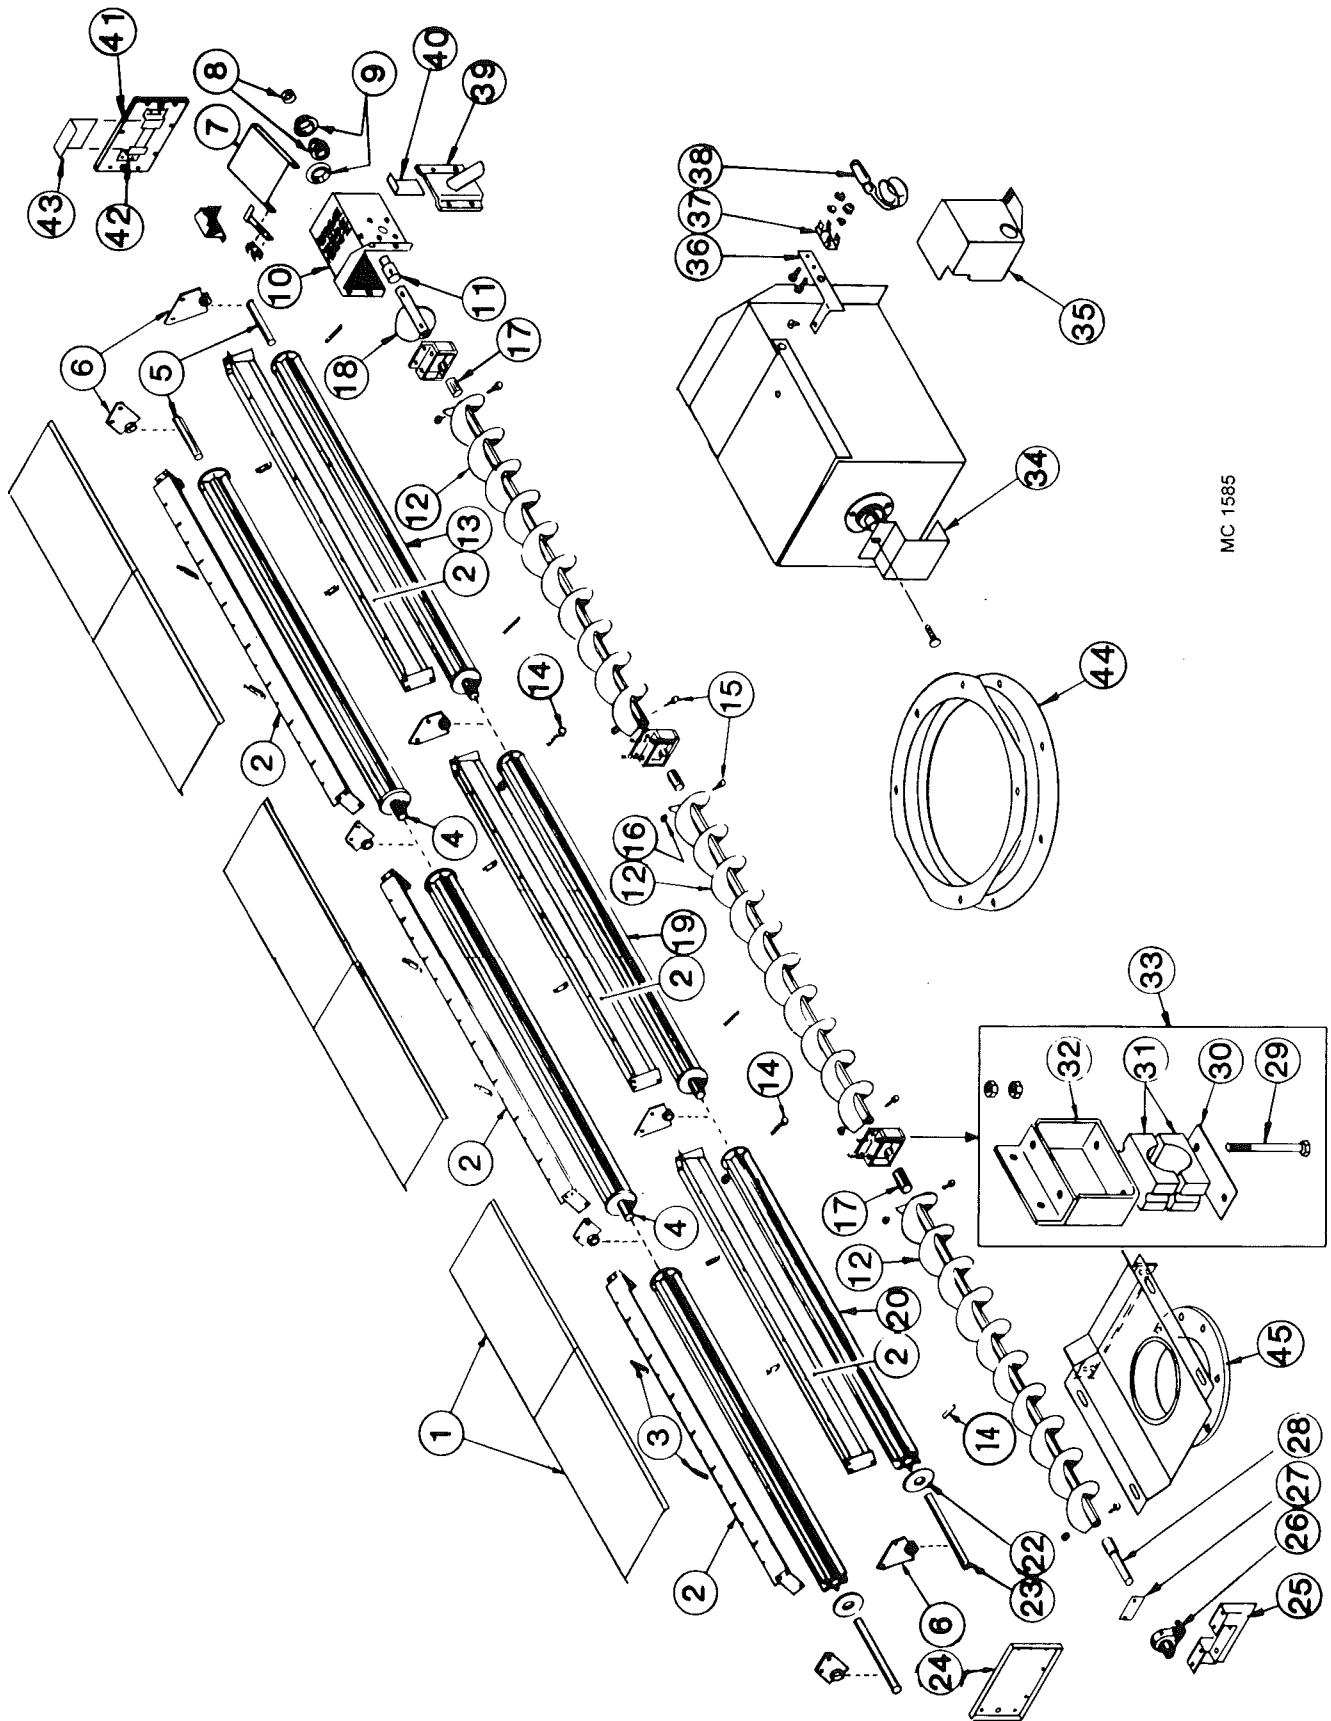

When replacing capscrews, be sure to use the correct size and grade. If a specific grade is not shown as part of the description, the capscrew is a grade 1 or 2.

CAPSCREW GRADE IDENTIFICATION CHART

S.A.E. Grade	Description	Capscrew Head Marking*
1	WILL HAVE A PLAIN HEAD - NO RADIAL LINES	
2	Low or Medium Carbon Steel Not Heat Treated	
5	WILL HAVE 3 RADIAL LINES Quenched and Tempered Medium Carbon Steel	
8	WILL HAVE 6 RADIAL LINES Quenched and Tempered Special Carbon or Alloy Steel	

*The center marking identifies the capscrew manufacturer.

Repair Kits and Parts for Modulating Valves, Solenoid Valves and LP Gs Pressure Regulators

For Modulating Valves 123 7002 & 123 7024

122 9993 Seat Kit (Incl. stem, disc holder
& diaphragm)
122 7006 Diaphragm.

For 1 1/4" (31.8mm) Solenoid Valve 128 7001

122 7034 Repair Kit (See note)
--- 4607 Coil

For 1/2" (12.7mm) Solenoid Valve 125 7082

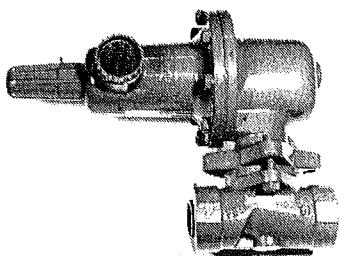

122 7039 Repair Kit (See note)
122 7001 Coil

NOTE: Kit includes all internal parts that would require replacement in normal service and installation instructions.

For LP Gas Pressure Regulator 128 7005

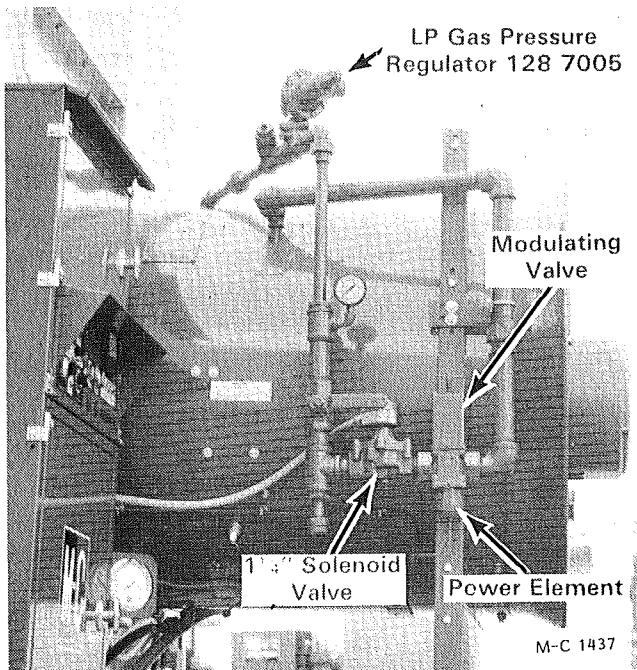

122 7043 Diaphragm (Nitrile)
122 7044 Disc Assembly
122 7045 Control Spring (Yellow)
122 7046 Stabilizer
122 7047 Diaphragm Case O Ring

Fisher LP Gas Pressure Regulators

INSTALLATION INSTRUCTIONS

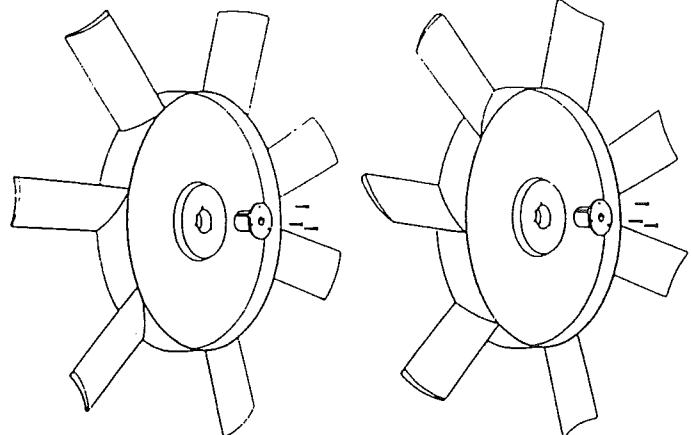

For Mounting Cast Aluminum Axial Fans on M-C Grain Dryers

CAUTION: Be sure to turn off and lock the main electric supply to the dryer before working on fan.

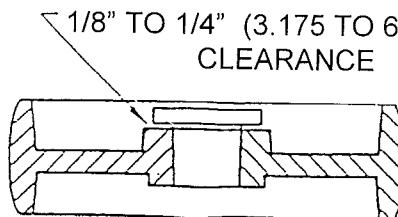

DO NOT use old bushing and bolts. Use new bushing and bolts supplied with this fan. **DO NOT** use lubricant on any parts.

1. Make sure that inner fan bore is clean of paint/debris. Make sure motor shaft is clean and bore of bushing is clean. Clean and remove all burrs or nicks.
2. Align unthreaded holes of bushing with threaded holes in the fan. Align the shaft key with black balancing line on the fan when possible.
3. Insert the three bolts without the nylon patch through the unthreaded holes in bushing into the threaded holes in the fan. Torque down all three bolts to 15 ft./lbs. (2.07 Kg-meters): start by finger tightening all three bolts and then tighten bolts equally 1/4 turn at a time rotating from bolt to bolt until reaching 15 ft./lbs. (2.07 Kg-meters). Once tight make 3 revolutions to verify that all bolts will not rotate at all. **FAILURE TO TORQUE THE BOLTS CORRECTLY MAY RESULT IN THE FAN COMING LOOSE FROM MOTOR SHAFT!**
4. Remove the bolts and install the bolts with flange whiz lock head, plus nylon patch. If a nylon patch bolt is not available, apply lock-tight. Lock-tight should be applied only at one specific location - 5/8" (15.88mm.) from head of bolt x 1/2" (12.7mm.) long.
5. Retorque bolts down to 15 ft./lbs. (2.07 Kg-meters).
6. When torqued at 15 ft./lbs. (2.07 Kg-meters), make 3 revolutions rotating from bolt to bolt at 15 ft./lbs. (2.07 Kg-meters) to verify that all bolts will not rotate at all.

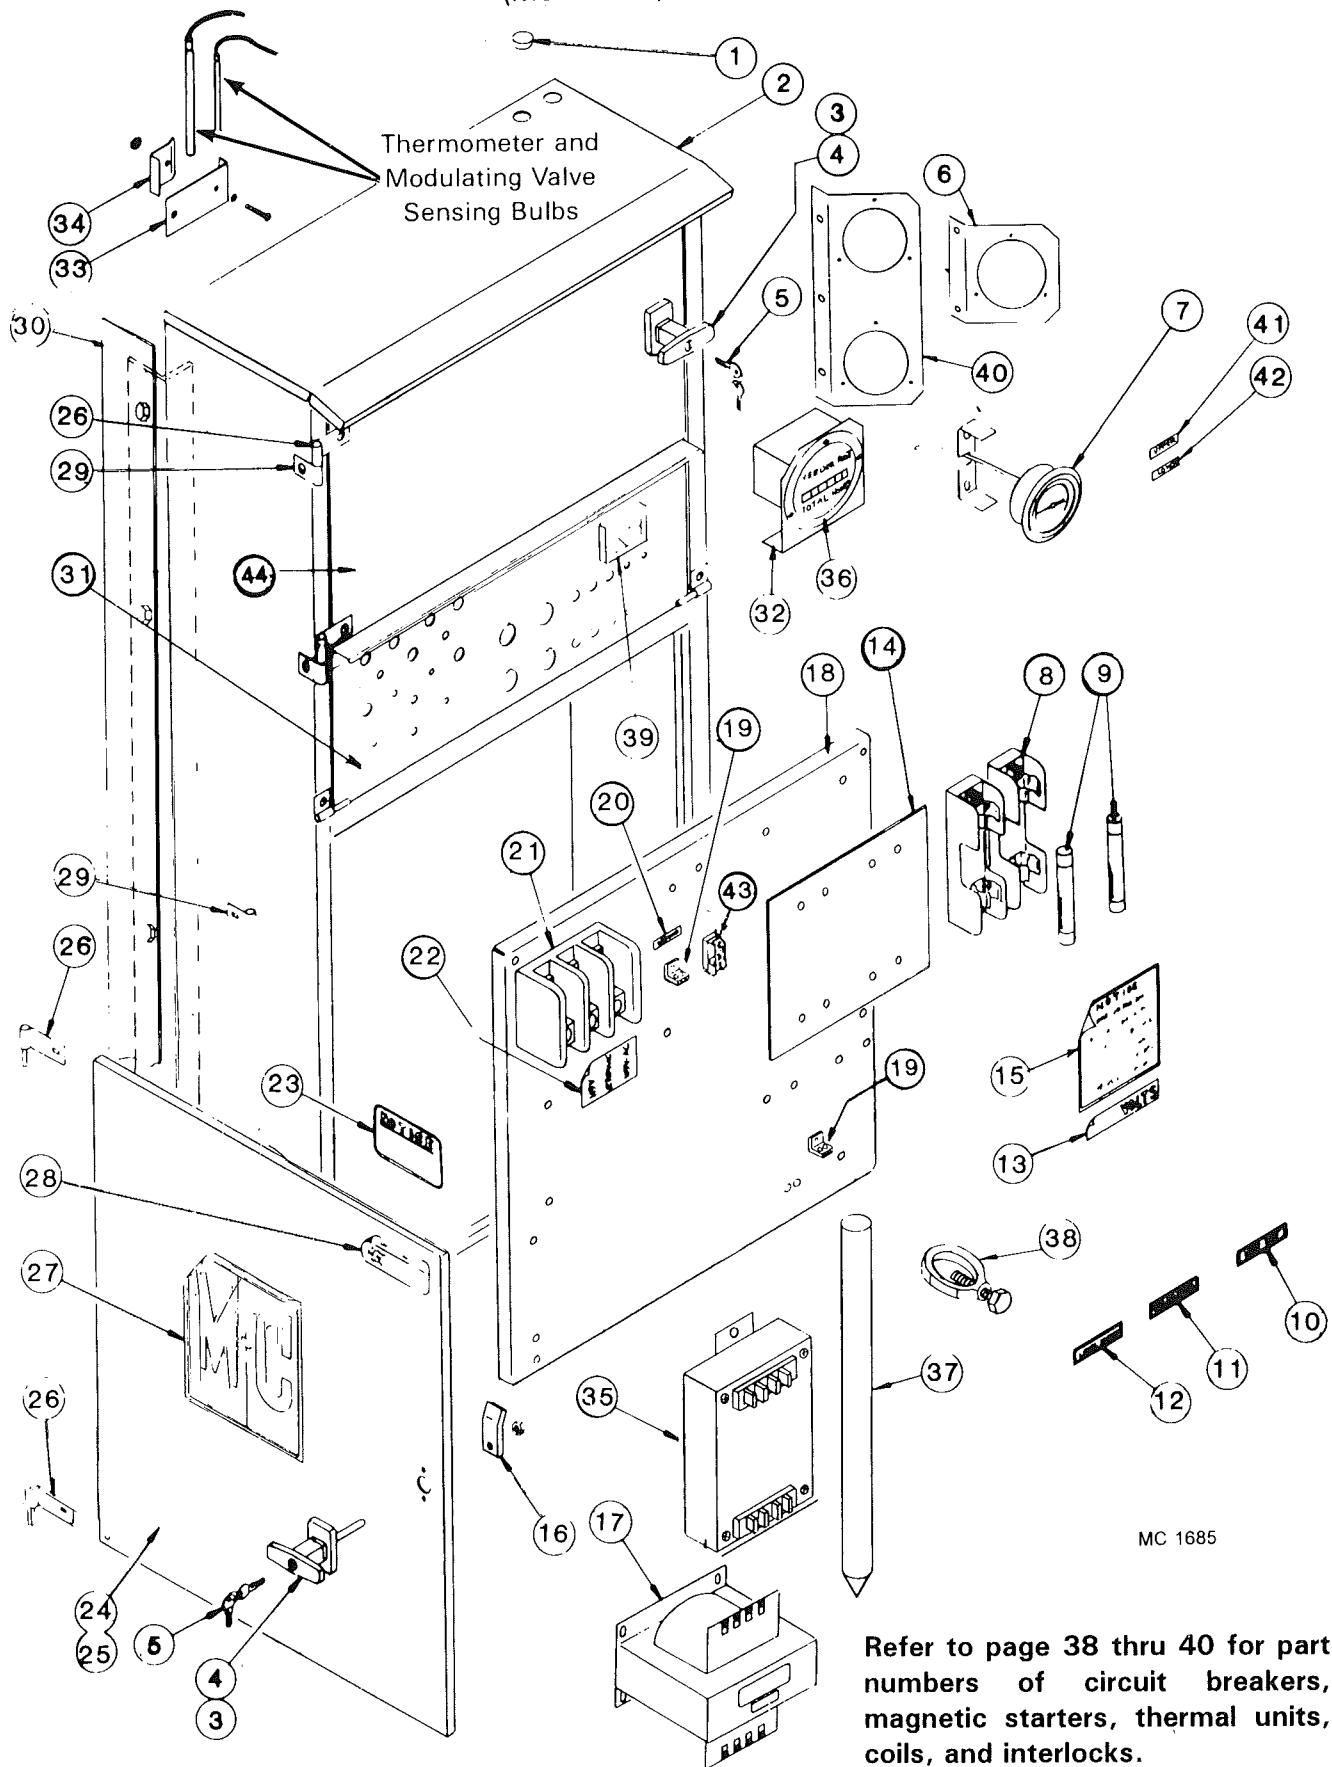

Note: If a pop is heard while tightening, it is possible the fan was cracked at the bolt holes. Do not attempt to use the fan if this has occurred. Remove the fan and inspect the bore of the fan for a crack running along the threaded hole of the fan. If a crack exists, call the factory immediately.

7. **CAUTION: DO NOT ATTEMPT TO PULL THE HEAD OF THE BUSHING FLUSH WITH THE CASTING!** There should be a clearance of 1/8" to 1/4" (3.175 to 6.35mm.) when the bushing is properly tightened. In no case should the fan be used if the bushing head is in contact with the fan. Contact the factory immediately if this occurs.
8. **BE SURE ALL TOOLS AND HARDWARE ARE CLEAR OF DRYER.** Manually rotate the fan to assure clearance between the blade and the housing. There should be a minimum clearance of 1/16" (1.59mm.) at any point. A minor motor position change or shaft and bearing position change may be required in order to obtain proper clearance. Reinstall guard and jog starter to assure the fan does not touch housing. Once clearance is assured, dryer is ready for operation. The dryer should be felt for vibration. Any vibration in excess of a tingling feeling to the fingers should be noted and the factory should be contacted.

115V and Motor Control Cabinet
 (Model 670, 690 & 970)

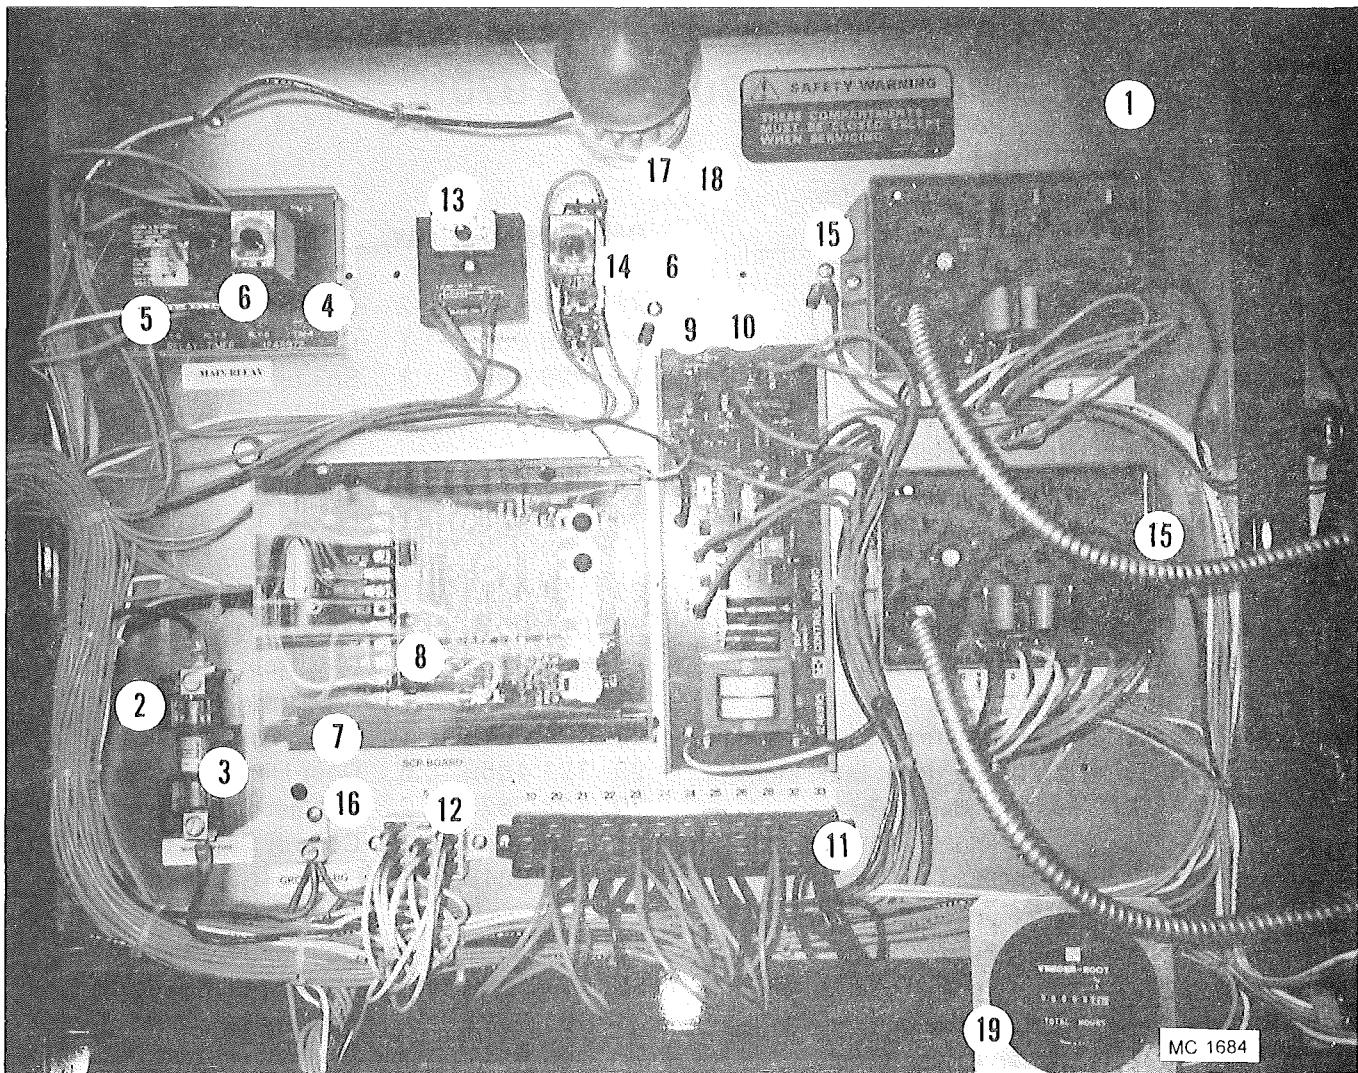

MC 1685

Refer to page 38 thru 40 for part
 numbers of circuit breakers,
 magnetic starters, thermal units,
 coils, and interlocks.
